

POLYEDGE STRUCTURES

ONLY LIMITED BY YOUR IMAGINATION...

"POLYEDGE" structures are categorised by 5 or more attachment points. Alternating high and low points create a unique 3D shape on the fabric surface which retains tension and allows water runoff.

Polyedges require minimal structural steelwork and take advantage of the fabrics' ability to span large distances without the need for regular supporting beams like conventional building methods.

Radical and aesthetically pleasing, Polyedges create that "wow" factor and really catch the eye due to their unusual and interesting form. Polyedges can incorporate continuous, strapped sealed edges to provide waterproofing over doors, etc.

Shade to Orders structures are an investment that will repay the customer with years and years of trouble free service. Fully warranted for up to 20 years with a design life of over 25 years, they are built to last.

Polyedges are always created completely custom to suit the specific site.
